Pavel Khlebko

Full-Stack Agentic Engineer (Angular, Node.js, TypeScript)

p.khlebko@gmail.com | github.com/pkhlebko | khlebko.com | Download CV

Summary

Full-Stack Agentic Engineer with 10+ years building secure, maintainable web systems and evolving delivery toward AI-orchestrated workflows.

I combine full-stack ownership and system design with agent direction and automation to improve velocity and reliability.

- **Delivery ownership:** End-to-end implementation across front-end and back-end; team leadership and cross-domain delivery.
- **Architecture and reliability:** Microservices, micro-frontends, dynamic routing, security-first engineering.
- **AI and tooling:** Generative workflow structuring; OpenSpec; Swagger-codegen; automated project tasks via Claude Code and GitHub Copilot CLI; AI-assisted migrations from Angular.js to Angular 18.
- **Selected achievements:** Angular UI library architecture; cross-platform PDF reporting with D3.js and AWS Lambda; full migration leadership.

Skills

JS and web

Angular, NestJS, TypeScript, JavaScript (ES5, ES6+), Node.js, D3.js, React, jQuery, HTML, CSS, SCSS, Less, Angular Material, AngularJS, Karma, Jest, Jasmine, Mocha, Cypress, PhantomJS, Swagger Codegen, Webpack, Grunt.

Cloud and DevOps

AWS, Google Cloud Platform, Azure DevOps, Docker, AWS Lambda.

Databases

PostgreSQL, MySQL/MariaDB, Oracle, Elastic Search.

Languages

- English — B2 Upper-intermediate
- Belarussian — Native
- Russian — Native
- Lithuanian — A2

Education

2002 - 2007 Biology — Belarusian State University

Past projects

SLB — myDigitalProduct

April 2026 — Present / Team Lead

- Gathered, documented, and validated requirements with stakeholder engagement.
- Guided architectural and design decisions aligned with project goals.
- Conducted code reviews to maintain quality and compliance.
- Drove AI adoption by setting up AI workflows and integrating AI-powered skills.

SLB — VTC

September 2025 — April 2026 / Team Lead

- Proposed end-to-end delivery models for SLB Virtual Technical Center program.
- Gathered and validated requirements ensuring traceability and stakeholder engagement.
- Guided architectural and design decisions.
- Developed and optimized key features, troubleshooting technical issues.

Takeda — Human Factors Data Management

February 2025 — August 2025 / Team Lead

- Gathered and validated requirements with stakeholder engagement.
- Implemented new functionality on existing MVP Angular application with AWS infrastructure.
- Guided architectural and design decisions aligned with project goals.
- Implemented security best practices to safeguard systems and data.

Schlumberger North America — Well Operations Advisor

October 2021 — December 2024 / Team Lead, Key Engineer

- Led full-stack development team. Planned and estimated timelines and deliverables.
- Designed micro-frontends and microservices from scratch.
- Led migration to new component library.
- Negotiated project details with managers and BA team. Onboarded new team members.

Thomson Reuters — ONVI

May 2021 — October 2021 / Key Engineer, Team Lead

- Led frontend development team.
- Managed migration of applications from Angular.js to Angular.
- Developed framework-agnostic vanilla TypeScript libraries.
- Maintained corporate UI component library.
- Implemented automated code generation utilizing Swagger Codegen.

Thomson Reuters — Checkpoint Engage

November 2020 — April 2021 / Key Engineer

- Migrated Angular.js application to Angular 9.
- Implemented linting, static code analysis, and 90% unit test coverage standard.
- Implemented new functionalities within the application.
- Supported production application.

Clarivate Analytics — Scholarly Citation Network

November 2018 — October 2020 / Key Front-end Developer

- Led front-end team, created JIRA stories, mentored developers, conducted interviews.
- Managed Angular.js to Angular 5 migration via hybrid approach.
- Developed chart types, PDF export with D3.js, dialog interfaces.
- Directed accessibility enhancement and performance optimization efforts.
- Developed React.js migration POC for report widgets.

Clarivate Analytics — Scholarly Citation Network

December 2016 — November 2018 / Engineer

- Implemented features, views, and dialog interfaces for production application.
- Developed POC for report generation using AWS Lambda with Node.js.
- Configured Phantom.js for server-side scripting.
- Developed REST APIs for new features.
- Managed front-end development team.

SCAD techno LLC

August 2009 — September 2016 / Team Lead

- Developed application architecture.
- Implemented backend using VB.net and MySQL.
- Implemented frontend using HTML, JavaScript, jQuery.
- Integrated solution into PLC firmware based on embedded Linux.
- Developed and executed company business strategies.

Career path

Period	Company	Role
December 2016 — Present	EPAM Systems	Software Engineer — Team Lead
August 2009 — September 2016	SCAD techno LLC	Software Engineer — Director & Team Lead
August 2007 — July 2009	Molecular genetic research of hemoblastoses and homeopathies lab	Researcher
August 2005 — July 2009	Freelance	Web developer
July 2003 — March 2005	Ensytech LLC	Network administrator
